APPLICATION NO.	FILING DATE	FIRST NAMED INVENTOR	ATTORNEY DOCKET NO.	CONFIRMATION NO.
10/765,348	01/27/2004	Istvan Cseri	MS141529.03/MSFTP1470USB	1077
27195 7590 05/02/2007 AMIN. TUROCY & CALVIN, LLP 24TH FLOOR, NATIONAL CITY CENTER 1900 EAST NINTH STREET CLEVELAND, OH 44114			EXAMINER WU, YICUN	
			ART UNIT 2165	PAPER NUMBER
			MAIL DATE 05/02/2007	DELIVERY MODE PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

<b>Office Action Summary</b>	<b>Application No.</b> 10/765,348	<b>Applicant(s)</b> CSERI ET AL.	
	<b>Examiner</b> Yicun Wu	<b>Art Unit</b> 2165	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) ☒ Responsive to communication(s) filed on 03 April 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) ☒ Claim(s) 1-17 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-17 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

#### Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_

- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: \_\_\_\_\_

### **III. DETAILED ACTION**

1. Claims 1-41 are presented for examination.

#### **Examiner's Remarks**

2. Applicant's arguments as to presented in the reply to previous office action, with respect to the rejected claims in view of the cited references as to "designating a mode from a plurality of modes " have been fully considered but they are moot in view of the new grounds of rejection.

Applicant did not specifically claim the feature "designating a mode from a plurality of modes " in applicant's claim 32-33 and 37-41.

**Claim Rejections - 35 USC § 102**

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 32-33 and 37-41 are rejected under 35 U.S.C. 102(e) as being anticipated over Cheng et al. (U.S. Patent No. 6,366,934).

As to claims 32 and 40, Cheng et al. discloses a method of generating an XML data stream from a query having a table ordering, the method comprising:

forming a query having a number of tables included in the query that define the XML data stream (col. 23, lines 56-60 and col. 24, lines 7-40) and (col. 21, lines 7-9);

transmitting the query to a database server to generate a rowset (col. 23, lines 56-60 and col. 24, lines 7-40); and

transforming the rowset into the XML data stream in response to the query (i.e. retrieving structured documents) (col. 3, lines 48-60), the data stream organized according to the order of the tables in the query (col. 23, lines 56-60 and col. 24, lines 7-40) and (col. 21, lines 7-9).

As to claim 33, Cheng et al. discloses a method wherein transforming the rowset into the XML data stream comprises:

Art Unit: 2165

forming a nesting schema from the number of tables included in the query (col. 23, lines 56-60 and col. 24, lines 7-40) and (col. 21, lines 7-9); and

utilizing the nesting schema to transform the rowset into the XML data stream (i.e. structural search) (col. 4, lines 1-5).

As to claim 38, Cheng et al. discloses a method , wherein

the query is a SQL query (col. 23, lines 56-60 and col. 24, lines 7-40).

As to claim 37, Cheng et al. discloses a computer-readable medium having computer-executable instructions for performing operations comprising:

forming a query (i.e. querying) (col. 3, lines 48-60) in which the XML data stream (col. 23, lines 56-60 and col. 24, lines 7-40) has an organizational structure defined explicitly in the query(i.e. structure search . col. 24, lines 35-40 and Col. 15, lines 46-48);

transmitting the query to a database server to generate a rowset (col. 3, lines 48-60); and

processing the rowset to produce the XML data stream in response to the query (col. 23, lines 56-60 and col. 24, lines 7-40).

As to claim 39, Cheng et al. discloses a method wherein the organizational structure is one or more of the group comprising

one or more table names (i.e. table. col. 23, lines 55-67), an ordered list of one or more tables (col. 23, lines 55-67), and

Art Unit: 2165

an explicit definition of a nesting of requested data and a naming of requested columns in the hierarchical data stream (col. 24, lines 7-40).

As to claim 41, Cheng et al. discloses a method 1, wherein the query further comprises one or more of element tags and parent tags (col. 24, lines 7-40).

**Claim Rejections - 35 USC § 103**

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which the subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-31 and 34-36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cheng et al. (U.S. Patent No. 6,366,934) in view of Richard et al. (U.S. Patent No. 6,484,160).

As to claims 1, 9, 11, 13, 26, 34 and 37, Cheng et al. discloses a computerized system comprising:

a database server (col. 3, lines 34-35) operable for receiving a query (i.e. querying) (col. 3, lines 48-60) and col. 23, lines 1-35), the query including mode information (col. 23, lines 56-60 and col. 24, lines 7-40) that specifies (col. 21, lines 7-9), within the query itself (col. 21, lines 7-9), a hierarchical data stream organization (i.e. structure search . col. 24, lines 35-40 and Col.

Art Unit: 2165

15, lines 46-48), and generating a rowset in response to the query (i.e. retrieving structured documents) (col. 3, lines 48-60); and

a rowset processor (col. 3, lines 48-60), operable for receiving and processing the mode information (col. 23, lines 56-60 and col. 24, lines 7-40) of the query and the rowset, to generate a data stream organized (i.e. retrieving structured documents) (col. 3, lines 48-60) according to the hierarchical data stream organization (i.e. document tree structure. Col. 15, lines 46-48) specified by the mode information (col. 21, lines 7-9);

Cheng et al. does not teach designating a mode from a plurality of modes.

Richard et al. teaches designating a mode from a plurality of modes (i.e. scope and filter arguments. Col. 5, lines 3-4).

Therefore, it would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified Cheng et al. to include designating a mode from a plurality of modes.

It would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified Cheng et al. by the teaching of Richard et al. to include designating a mode from a plurality of modes with the motivation to optimizing accesses to a database organized into trees as taught by Richard et al. (col. 4, lines 65-67).

As to claim 2, Cheng et al. as modified teaches a computerized system, wherein the query is a structured query language (SQL) query (Cheng et al. col. 6, lines 48-57).

Art Unit: 2165

As to claims 3 and 21, Cheng et al. as modified teaches a computerized system, wherein the query is a flat query (Cheng et al. col. 6, lines 48-57).

As to claim 4, Cheng et al. as modified teaches a computerized system, wherein the hierarchical data stream is an eXtensible Markup Language (XML) data stream (i.e. XML contents and attribute values) (Cheng et al. col. 21, lines 24-27).

As to claim 5, Cheng et al. as modified teaches a computerized system wherein the mode information comprises one or more table names (i.e. table. col. 23, lines 55-60).

As to claim 6, Cheng et al. as modified teaches a computerized system, wherein the mode information comprises an ordered list of one or more tables (col. 23, lines 55-60 and col. 24, lines 7-40).

As to claim 7, Cheng et al. as modified teaches a computerized system, wherein the mode information comprises

explicitly defining a nesting of requested data and a naming of requested columns in a hierarchical data stream (col. 23, lines 65-67 and col. 24, lines 7-40) .

Art Unit: 2165

As to claim 8, Cheng et al. as modified teaches a computerized system, wherein the rowset processor transforms the rowset into a universal table (i.e. a buffer) (Cheng et al. col. 20, lines 54-55) subsequently processed to generate a hierarchical data stream (col. 24, lines 7-40).

As to claims 10, 12 and 25, Cheng et al. as modified teaches a computerized system, comprising:

a client coupled to the rowset processor, the client is capable of receiving the hierarchical data stream (fig. 1).

As to claim 16, Cheng et al. as modified teaches a computerized system, wherein the query includes a clause directing the rowset processor to return the XML data stream (col. 23, lines 65-67 and col. 24, lines 7-40).

As to claim 18, Cheng et al. as modified teaches a computerized system wherein the mode information defining the XML data stream organization is primary-foreign key information included in the query (col. 13, lines 1525).

As to claim 19, Cheng et al. as modified teaches a computerized system wherein mode information defining the XML data stream organization is implied in the ordering of a number of tables included in the query (i.e. formulate relational operations on the tables) (Cheng et al. col. 6, lines 6165) and (Cheng et al. col. 4, lines 1-5).

Art Unit: 2165

As to claim 20, Cheng et al. as modified teaches a computerized system wherein the information defining the XML data stream is explicitly provided in the query (col. 6, lines 61-65) and (Cheng et al. col. 21, lines 2-19).

As to claim 22, Cheng et al. as modified teaches a computerized system further comprising:

wherein the query is a nested query (i.e. structural search) (col. 4, lines 1-5).

As to claim 23, Cheng et al. as modified teaches a computerized system wherein the rowset processor is a subsystem of the database system (col. 3, lines 34-47).

As to claim 24, Cheng et al. as modified teaches a computerized system wherein the rowset processor is an add-on to the database system. (i.e. extender. col. 3, lines 34-47).

As to claim 27, Cheng et al. as modified teaches a computerized system wherein transforming the rowset into an XML element comprises:

mapping each non-null column value of the rowset to an attribute of the XML element (Cheng et al. col. 21 lines 49 to col. 22, lines 7).

As to claim 28, Cheng et al. as modified teaches a method of generating an XML data stream from a query, the method comprising:

Art Unit: 2165

creating a query (i.e. querying) (col. 3, lines 48-60) and col. 23, lines 1-35), the query including mode information that specifies (col. 23, lines 56-60 and col. 24, lines 7-40), within the query itself (col. 23, lines 56-60 and col. 24, lines 7-40), an eXtensible Markup Language (XML) data stream organization (i.e. structure search . col. 24, lines 35-40 and Col. 15, lines 46-48) by a primary foreign key relationship (Cheng et al. col. 13, lines 15-25);

transmitting the query to a database server to generate a rowset (col. 3, lines 48-60); transforming the rowset into a nested XML tree by using the primary-foreign key relationship to determine (Cheng et al. col. 13, lines 15-25) nesting in the nested XML tree (col. 23, lines 56-60 and col. 24, lines 7-40); and

processing the nested XML tree to return the XML data stream, organized according to the determined nesting in response to the query (col. 23, lines 56-60 and col. 24, lines 7-40);

Cheng et al. does not teach designating a mode from a plurality of modes.

Richard et al. teaches designating a mode from a plurality of modes (i.e. scope and filter arguments. Col. 5, lines 3-4).

Therefore, it would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified Cheng et al. to include designating a mode from a plurality of modes.

It would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified Cheng et al. by the teaching of Richard et al. to include designating a mode from a plurality of modes with the motivation to optimizing accesses to a database organized into trees as taught by Richard et al. (col. 4, lines 65-67).

Art Unit: 2165

As to claim 29, Cheng et al. as modified teaches a method of generating a method, wherein creating a query containing a primary foreign key relationship comprises:

ordering tables in the query to produce an organization of the XML data stream for a one to many relationship (col. 23, lines 56-60 and col. 24, lines 7-40).

As to claim 30, Cheng et al. as modified teaches a method wherein transforming the rowset into a nested XML tree by using the primary-foreign key relationship included in the query to determine nesting in the nested XML tree comprises:

forming a nesting schema from the nested XML tree (col. 23, lines 56-60 and col. 24, lines 7-40); and

utilizing the nesting schema to transform the rowset into a nested XML tree (col. 23, lines 56-60 and col. 24, lines 7-40).

As to claim 31, Cheng et al. as modified teaches a method wherein processing the nested XML tree to return the XML data stream in response to the query comprises:

representing each table listed in the query that has at least one column in a query result as an XML element.

As to claim 35, Cheng et al. as modified teaches a computer readable medium, wherein processing the rowset to return the XML data stream in response to the query comprises:

transforming the rowset into a universal table (col. 20, lines 54-55);; and

processing the universal table to produce the XML data stream (col. 20, lines 54-55);.

As to claim 36, Cheng et al. as modified teaches a computer readable medium, wherein transforming the rowset into a universal table comprises:

executing a union over all selections in the query (i.e. union(R1 ,r2)(Cheng et al. col. 17, lines 41-61)..

Art Unit: 2165
